

III.A.4.b Fecal Coliform Inventory

The Wisconsin Professional Baseball Park District (WPBPD) has identified various sources contributing to bacterial loading from its site. This document has been prepared to comply with the District's MS4 permit, specifically Section III.A.4(b) - MS4 Fecal Coliform Inventory. The goal of this plan is to identify and reduce bacterial discharges into local waterways. The District may incorporate bacteria into the Illicit Discharge Detection and Elimination (IDDE) program to eliminate bacteria from discharge.

The identified sources are listed in the table below and include portable toilets, garbage storage, and animal waste, etc. Exhibit 1 provides the approximate locations of these sources, although their positions may vary slightly due to relocations after events. The bacterial loading is expected to remain consistent, as the infrastructure is consistent.

The District has identified the following 6 sources that could potentially enter the Menomonee River. They are summarized as follows.

Table 1 Fecal Coliform Potential Bacteria Sources

Map ID	Location	Land Use	Potential Bacteria Source
1	The whole SEWPBPD site	Parking, Storage, Trail, etc.	Seagulls, geese, dogs, etc.
2	Parking Lots	Parking	Portable toilets leaking and spills
3	Parking Lots	Parking	Garbage bin storage
4	Menomonee River Trail	Trail use	Animal waste, dogs, etc.
5	East Lot	Bus/RV Parking	Potential leaks/dumps from bathroom facilities
6	Lot 13	Storage	Garbage storage/compaction
